ROBIN TAY

+1 555 0100 • robin.tay@example.com • linkedin.com/in/robin-tay-example • github.com/robin-tay-example

Available Jan 2027 - Jun 2027

EDUCATION

BSc Business Analytics Aug 2023 - May 2027 (Expected)

Harbourview University

- GPA of 3.6 out of 4.0.
- Relevant coursework: Database Systems, Data Warehousing, Data Visualisation, Statistics for Business, Regression Analysis, Programming with Python, Machine Learning for Business.

EXPERIENCE

Data Analyst Intern May 2026 - Aug 2026

Larkspur Freight

- Wrote and documented the SQL that pulls about 1.2 million delivery records from the PostgreSQL warehouse into one clean table, checked against the finance team's monthly delivery count.
- Built a Power BI dashboard of on-time delivery rate that refreshes every morning, reaching about 25 weekly users and replacing a manual Excel update of about 3 hours a week.
- Joined delivery records to driver shift data in Python (pandas) and found that 38% of late deliveries came from routes with depot loading times over 45 minutes.
- Presented the finding to the head of operations and 4 depot managers. Two depots then changed their loading schedules, and their on-time delivery rose from 87% to 92% over 6 weeks.

PROJECTS

Budget Buddy Jan 2026 - Apr 2026

Personal Project

- Built a Python tool, also used by 4 coursemates, that cleans bank CSV exports in pandas by fixing date formats, merging two export formats and removing duplicate rows.
- Trained a logistic regression model in scikit-learn on TF-IDF features from about 2,000 hand-labelled transactions, reaching 91% accuracy on a held-out set of 400.
- Automated a monthly Excel summary with a chart per category, cutting the time to categorise a month of spending from about 40 minutes to under 5 minutes.

HACKATHONS AND CASE COMPETITIONS

Harbourview Datathon 2026 Mar 2026

Harbourview Analytics Society

- Placed 2nd of 30 teams in a 48-hour datathon on customer retention, predicting which customers of a subscription meal kit company would cancel.
- Engineered features such as order frequency, days since last order and skipped weeks for the team's gradient boosting model, which reached an AUC of 0.84 on the organisers' test set.
- Built the slides and presented the team's recommendation to offer a discount to customers who skipped 2 weeks in a row, which the judges called the easiest to act on.

LEADERSHIP & CO-CURRICULAR ACTIVITIES

Treasurer Aug 2025 - Present

Harbourview Analytics Society

- Ran an introductory SQL workshop for first-year members twice, teaching about 60 members in total.
- Moved expense tracking from paper receipts to a shared Google Sheet with a claim form, cutting reimbursement time from about 3 weeks to about 5 days.
- Manages a yearly budget of about 8,000 dollars, mostly datathon sponsorship, for a society of about 150 members, and was re-elected for 2026 to 2027.

SKILLS

Technical: SQL (PostgreSQL, SQLite), Power BI, Python (pandas, scikit-learn, LightGBM, openpyxl), Excel, Git, Google Sheets, logistic regression, gradient boosting, feature engineering, TF-IDF text features
